

Pandemic Response

Protecting your world during a pandemic

Security

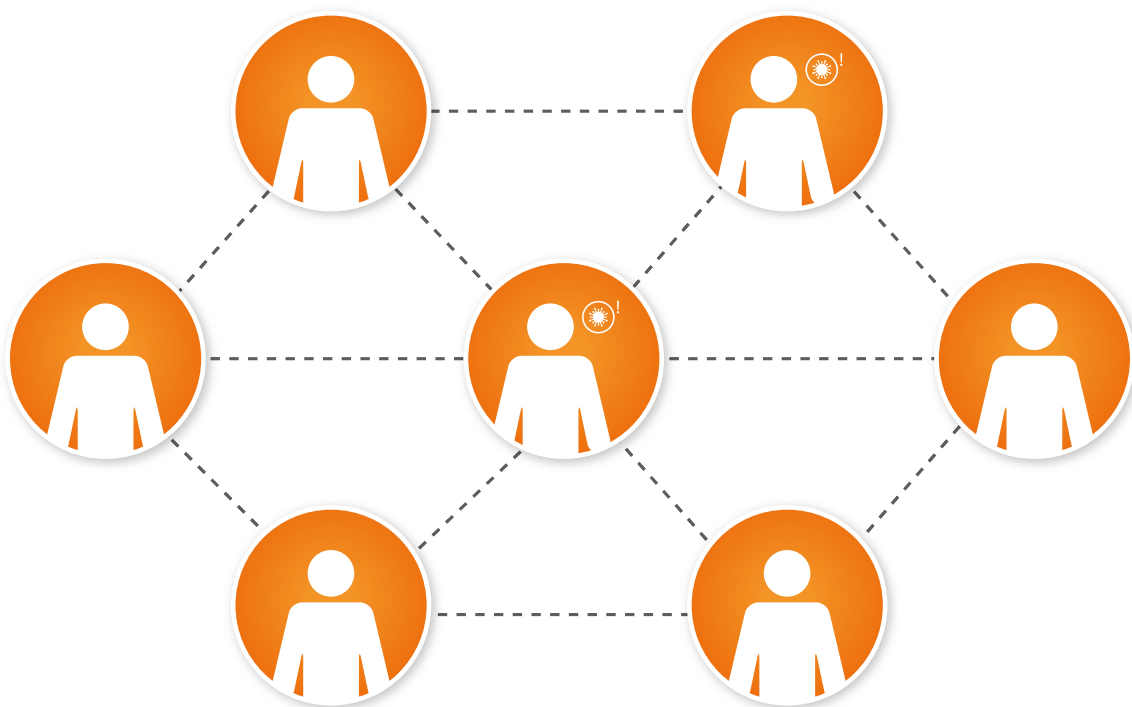

A global pandemic is an unpredictable event that can have serious consequences for the health and safety of your staff and business. In an ever-changing world, being prepared for a global health emergency should be an integral part of your security solution.

At Gallagher, it's important to us to help you prepare for the unpredictable.

Site Management

Gallagher security solutions are highly flexible and can be used to help you prepare for and respond to the threat of a pandemic. Making the most of your security system can ensure your site runs as smoothly as possible and mitigate the risk of virus transmission.

- Implement a contactless biometric access solution to reduce contamination risks and provide a secure environment with Idemia Wave readers.
- Meet social distancing requirements with Zone Counting and set alerts if the number gets too high, or deny access if zone is at capacity.
- Set up Random Selection of cardholders upon entry to site for the purpose of medical checks.
- Configure competency warnings and messaging to display important reminders to staff when they present their credential at a T20 reader. For example, hand sanitization on arrival at site.
- Interfacing your access control system with building management systems allows services such as air conditioning, lighting, and heating to respond to the presence of people within the area. During a transitional period of remote working or lockdown periods, this can ensure energy use is only consumed when it is needed, and costs are minimized.
- Command Centre's Fatigue and Exposure Management solution helps to minimize risk of exposure by monitoring cardholders' time in a designated work area after a certain period of time.

Proximity and Contact Tracing Report

Gallagher's innovative and award-winning **Proximity and Contact Tracing Report** was rapidly designed and deployed in response to the COVID-19 pandemic. The software was developed to support organizations with protecting the health and safety of staff while on site and to allow fast and efficient contact tracing with their Gallagher security solution.

Utilizing Gallagher Command Centre's powerful reporting capability, the report enables businesses to quickly and accurately identify areas where an employee with either a confirmed or suspected case of an infectious virus has been on site.

The report identifies which other cardholders shared an area with the identified individual within the exposure time frame.

Mobile Solutions

Whether it's the flexibility to monitor your system from any location, or the convenience of using a smart phone in place of an access card, our extensive range of mobile solutions can be utilized to help reduce and mitigate the risk of virus and infection spread.

- Our Mobile Connect App securely transforms a mobile device into an access card allowing staff to interact with building systems, arm and disarm areas, and much more.
- Mobile credentials remove the need to use a physical keypad for second factor authentication, lowering potential contamination exposure.
- Physical cards and pin numbers can be issued with remote provisioning, lowering the danger of virus spread between staff and visitors by reducing face-to-face interactions.
- Push notifications allow you to communicate important information efficiently with cardholders, especially in emergency situations. For example, stay off-site and isolate.

Visitor Management

By utilizing the features of Gallagher's Visitor Management Workstation for arrival and departure of visitors, we can help ensure your business continues to run as smoothly as possible while also meeting social distancing and hygiene requirements.

- Minimize contact between a receptionist and external visitors/contractors by utilizing the issuance of mobile credentials. Less physical cards can greatly lower potential contamination risk.
- A visitor management kiosk allows external visitors/contractors to self-register and notify hosts of their arrival without interacting with reception.
- A comprehensive audit trail of all visitor management events, including receptionist actions, visitor pre-registration, escort, host, and visitor actions, is securely maintained on the Command Centre server, allowing effective visitor tracing if needed.

Emergency Management

Accurate and timely communication is essential in order to prevent and reduce the health and economic consequences of a pandemic. Gallagher Command Centre helps you respond swiftly and accurately during emergency situations, such as a global virus outbreak, by providing critical information and updates to those who need it.

- Broadcast Notifications enables you to communicate via SMS or email to update people on site about potential virus contamination or lockdown procedures, getting critical information directly to those who need it.
- Gallagher's Tag Boards feature and Mobile Evacuation enables you to identify and account for personnel in specific zones and is a great way to see the number of people on site, and who they are.
- In an emergency, Gallagher's access control solutions allow you to quickly and easily lock down the site with the push of a button, or through the Gallagher Mobile Client, enabling you to lockdown the site in the event of a virus outbreak and limit the further spread of disease.

Talk to Gallagher today

At Gallagher, we're keen to help you prepare for the unpredictable and ensure you have the tools to respond to the threat of a pandemic.
